## PROJECTS

**News API Email Notifier** | *Python, REST API, SMTP*

- Built an automated Python app that fetches real-time news via a REST API and delivers personalized email summaries to subscribers.
- Modular architecture separating API retrieval and email dispatch — demonstrates clean code design and debugging practices.

**PDF Generation Tool** | *Python, File I/O*

- Developed a Python utility to programmatically generate structured PDF documents from dynamic data inputs.
- Practiced debugging and iterative problem-solving across complex file handling and library integration scenarios.

**Python Course Projects Collection** | *Python*

- Built a series of Python projects covering data structures, algorithms, OOP, and file handling.
- Maintained all projects on GitHub with consistent commit history, reflecting professional Git workflow practices.

## KEY STRENGTHS

- Strong problem-solving skills demonstrated through real-world Python automation projects.
- Quick learner — independently acquired skills in REST APIs, database design, and version control through self-directed study.
- Familiar with the full Software Development Life Cycle (SDLC) including planning, development, testing, and deployment phases.
- Clear communicator with an ability to document and structure code for readability and maintainability.
