OBJECTIVE

Final-year Computer Science student (CGPA 8.3) with hands-on experience building and deploying full-stack React applications. Comfortable across the modern JavaScript/React ecosystem — component architecture, hooks, REST API integration, and responsive UI — with a working foundation in backend development (Node/Express, Python) and a strong track record of independently shipping and debugging production-deployed projects. Looking to contribute as a Full Stack Development Intern and grow into Spring Boot-based backend systems.

TECHNICAL SKILLS

- **Frontend:** JavaScript (ES6+), React.js (Hooks, Context, component-based architecture), HTML5, CSS3, Tailwind CSS, Responsive Web Design
- **Backend & APIs:** Node.js, Express.js, REST APIs, Python, FastAPI, serverless functions (Vercel)
- **Databases & Cloud:** MySQL, MongoDB, Firebase (Auth + Firestore), Oracle
- **Tools & Practices:** Git & GitHub, VS Code, Vercel deployment, OOP, SDLC, Debugging, Data Structures & Algorithms

PROJECTS

DevRef — Developer Cheat Sheet App | *React 18, Vite, Tailwind CSS, Firebase (Auth + Firestore), Framer Motion*

[GitHub](#) | [Live Demo](#)

- Built and deployed a full-stack reference tool with 24+ searchable code snippets across 8 languages, featuring live search, language filters, and one-click copy.
- Implemented Google/email authentication and real-time data sync with Firestore, letting logged-in users bookmark snippets and contribute new ones instantly.
- Designed a custom dark, neon-accented UI with Framer Motion animations, and shipped it to production on Vercel with a distinct, non-templated visual identity.

AI Resume Builder | *React 19, Vite, Node.js, Express, MongoDB, JWT & Google OAuth, Gemini AI*

[GitHub](#)

- Developed a full-stack resume builder with a React frontend and an Express/MongoDB backend supporting secure authentication (JWT + Google OAuth) and resume versioning.
- Integrated Gemini AI to power resume review, bullet-point generation, and ATS keyword/job-matching analysis, structured through a service-layer backend architecture.

News API Email Notifier | *Python, REST API, SMTP*

[GitHub](#)

- Automated a Python app that fetches real-time news via REST API and delivers personalized email summaries, with a modular architecture separating retrieval and dispatch.
